Information management

HYDRA X

BUILD YOUR FACTORY SMART

Is your **information** always available where it's actually needed? ... and what about communication in production?

Motivation

"There is a German proverb saying that "**paper** is patient" - meaning that paper will bear anything, but it should say that you need patience with paper! **Checklists**, **meetings**, **notes** – paper everywhere. This can't go on!"

"If something **goes wrong** in our production and no one makes a note, nothing happens. Only when someone picks up the **phone** and **reports the incident**."

"The **results** of our **meetings** are always distributed by **mail**. And if you get too many mails, then the **measures** you have set also go astray. Too bad ..."

Your Issue

- Digitize your production meetings.
- Define digital dashboards & make them available in relevant places.
- Standardize communication & workflows.
- Replace paper checklists with integrated software.

Our Solution

With the mApps of the HYDRA X category Information Management, you can ...

... summarize important information on flexible dashboards.

... improve the structure of production meetings and support them digitally.

... manage defined events in a standardized way with workflows and measures.

... improve and document your communication on the shop floor.

... support walkabouts, audits and inspections with digital checklists.
